University of California
Davis, California

Dear Gerry:

I just got back from a trip and one of the things I was looking forward to seeing was the bibliography you promised me on the spectrophotometry of turbid suspensions. This will be equally welcome whenever you can send it.

You will have caught the slip on the flow sheet on the diagram 8-4: the fraction that is saved for further examination should be labeled $d < 1.2$.

Since talking to you I have had one or two leads on a possible research associate in exobiophysics but they are not so very promising and I would be delighted if you can suggest any names.

Yours sincerely,

Joshua Lederberg
Professor of Genetics

MARR, A.G.
